More than six drinks on an occasion?

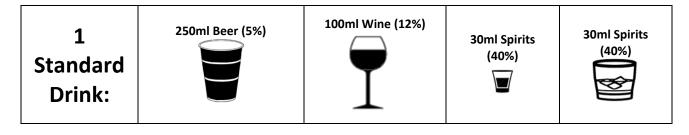

Pre-Screen Question

Question	1 – Yes	2 – No			
Have you been asked about your alcohol use at an appointment in the last year?			lastyear		
If NO apply AUDIT – C Alcohol Screening. If YES end here, there is no need to screen					
again					

AUDIT-C Alcohol Screening

- Read questions as written and record answers carefully.
- Begin the AUDIT by saying "Now I am going to ask you some questions about your use of alcoholic beverages during the past three months."
- Explain what is meant by "alcoholic beverages" by using local examples of beer, wine, vodka, etc.

Alcoholic drinks contain different concentrations of alcohol, for example a full glass of brandy contains more alcohol than a full glass of beer. What we call a standard drink is a drink containing 10 grams of alcohol. As shown in these pictures, a standard drink is equivalent to: one glass of beer, one small glass (shot) of brandy or whisky, one medium glass of or wine.

• Code answers in terms of "standard drinks". Place the correct answer number in the box at the right.
